

Cape Henlopen High School

"That's really what science is, just trying to figure stuff out, and I like figuring stuff out"

-- Steven Squyres NASA

May 2, 2022

To Prospective Honors Biology Students:

To prepare you for your upcoming Honors science course, you are required to complete ***Introducing Biology -- An Investigation*** in our Schoology course 'Honors Biology 2022'. This course will appear through your Schoology page starting Monday, June 13. The summer activity has you accessing a variety of resources, working with apps and other tools we will use in the classroom, and building skills that will help you be successful in learning throughout the Honors biology course. Without completion, you will set yourself behind because you will miss out on the many learning experiences we have set for you!!

You are expected to partake in the online, interactive assignments over the summer AND will be responsible for submitting parts of the work before starting the course next school year. **All Honors Biology students will be assessed** on the experiences during the first full week of the class. Don't worry – if you have any trouble, we will review the information and continue to build our knowledge during our first few days!

While working yourself through these activities, please feel free to access all the resources you have at your fingertips. There are direct links to the resources needed to complete activities through this investigation as well. The Schoology page is set up so you can comment or ask any questions as needed and see other students' feedback, as well as instructor responses. As you work, feel free to contact us over the summer through email or Schoology.

If you have any questions or concerns, do not hesitate to email or message us through the Schoology course! Have a great summer and we are excited to meet you soon!

Good Luck!
